About Builtech Private Limited

BUILTECH Established in 2007 with a number of highly skills people, And We Specialized on the landscape building Façade Work from 20012 At present. We have number of people for executing different type of Aluminum glass work. We accomplished a lot of renounce work.

Builtech PVT Ltd is working in the field of Glass, Stainless Steel, Aluminum composite panel all kind of Ceiling, Stainless Steel & Mild Steel. Now we ready to take challenge all kind of Aluminum & glass work for fabricating & supplying.

Arena of our service

- + Unitized System Curtain Wall
- + Semi-unitized System curtain wall
- + Stick system Curtain wall
- + Structural Glass & Spider Glazing curtain wall
- + Aluminum Sliding Door & Window
- + Automatic Sliding Door (Sensor Door)
- + Folding glass door
- + Shower enclosure & door
- + Glass Roof
- + Glass with PVC Profile
- + Glass Stair
- + Others all kind of Aluminum & Glass Work

& Aluminum composite panel (ACP)

Unitized System Curtain Wall:

Unitized System Curtain Wall Work

Unitized system curtain wall have become the preferred method for enclosing buildings, as more building owners, architects and contractors see the benefits of this type of construction. Unitized systems allow buildings to be enclosed quickly, which can help to speed up the construction process leading to earlier occupation. The fabrication process for unitized systems is more consistent than for stick-built curtain walls, as unitized wall systems are constructed in almost an assembly line fashion,

indoors, and under controlled environmental condition

Semi-Unitized System Curtain Wall Work

Semi-Unitized System Curtain Wall:

A semi-unitized system curtain wall glazing system is a type of structural glazing where the primary structural framing components are erected individually as an erector set. In this set, the vertical mullions are attached first to the floor slabs and the horizontals are attached to the vertical mullions to resemble a grid. The glass panel and the spandrel, which can be either glass or aluminum are shop glazed and installed into the assembled grid work. The joineries and perimeter sealants are fields installed. The semi unitized systems largely anchored to the face of the slab as embedded plates or inserts.

Advantages of Semi-Unitized System Curtain Wall:

The vertical mullions in most semi-unitized glazing systems can span two floors with ease and as a result, provide greater structural efficiency.

Most semi-unitized glazing systems have shop-assembled or off-site assembled frames. This reduces the time and cost.

Limitations of Semi-Unitized Glazing

The flip-side of having off-site assembled frames is the increased transport cost and storage cost at the manufacturer's place.

Stick System Curtain Wall Work

A stick-built curtain wall refers to the method of construction by which the curtain wall is assembled on site, piece by piece. The manufacturer delivers each individual component; glass, mullion, spandrel; and glaziers assemble the curtain wall directly on the structure.

A stick-built curtain wall

A stick-built curtain wall refers to the method of construction by which the curtain wall is assembled on site, piece by piece. The manufacturer delivers each individual component; glass, mullion, spandrel; and glaziers assemble the curtain wall directly on the structure.

The advantage of a stick-built system comes from its cost savings over a unitized system. On small project, the scale is too small to make it economical to prefabricate panels, so the added on-site time and cost is worth the higher unit cost associated with a small-scale unitized system. For this reason, stick built systems are typically used on small to mid-sized projects

Structural Glass & Spider Glazing curtain walls

Structural Glass & Spider Glazing curtain walls provide maximum daylight for building interiors, as well as the possibility of placing large transparent glass surfaces as building envelopes. Due to its visual attractiveness such architectural building envelopes are commonly used on commercial buildings to create premium building skins. A wide variety of applications are available, including curtain walls, canopies and atriums, allowing maximum transparency, brightness optimization and unique design. Structural Glass & Spider Glazing facades are best categorized by the structural system types used to support them.

Technology used to fix glass panes includes use of special fittings, such as spiders, Routels, clamps, tension rods and other supporting parts, which are connected to the supporting structure. All hardware is made of high-quality mirror polished stainless steel (graded 304, 316, 316LM and V4.A), ensuring best possible protection against oxidation and corrosion. Glass panes are provided in various shapes and are installed without additional vertical and horizontal profiles on the outer side of the façade, being connected by special structural silicone highly resistant to weather conditions and UV radiation. In terms of performance and aesthetics, there are options for clear or low-e glass, low-iron processing, reflective or toughened coating (external or internal finish), as well as silk printing (fritting).

Others Type of Aluminum Glass Work

▶ Aluminum Sliding Door & Window

▶ Automatic Sliding Door

▶ Folding glass doors

▶ Shower enclosure & Door

▶ Glass Roof

▶ Glass with PVC Profile

▶ Glass Railing

▶ Glass stair

& others all kind of

Work

ALUMINIUM COMPOSITE PANEL (ACP)

We are successfully involved in offering Aluminum Composite Panel Service (ACP Service) which is done by using a process known as extrusion. It's durable and easy to maintain and provide safety from air and water infiltration. They are used in high rise buildings to ensure stability and can be customized as per the specifications of our clients.

Glass Performance

SGG CLEAR COSMOS (ET 125)

SGG Evo is an advanced coated glass manufactured by the state-of-art magnetron sputtering process under vacuum conditions. SGG Clear Cosmos is an energy efficient glass that offers high performance across all seasons.

FEATURES

SGG Clear Cosmos is a cutting-edge product that offers dual advantages of solar protection and thermal insulation in both single and double Glazing applications.

- Solar control
- Advanced thermal insulation
- Lowest U value in SGUs
- UV protection
- Better night view due to low internal reflection

THICKNESSES

- Standard thicknesses of 4mm, 5mm and 6mm are available
- 8mm, 10mm and 12mm are available on special request

PROCESSING

SGG Clear Cosmos is suited for use in both single and double glazed units. To obtain its performance and aesthetics, SGG Clear Cosmos can be

- Tempered /Heat Strengthened
- Assembled into an IGU
- Laminated units
- Bent units

APPLICATIONS

- Windows
- Skylights
- Structural glazing
- Façade glazing
- Bolted systems
- Curtain wall glazing
- Fenestration applications.

SUSTAINABILITY

As the world leader in glass manufacturing for the construction market, Saint-Gobain worldwide is committed to provide innovative solutions.

SGG Clear Cosmos can add value in occupant comfort, energy efficiency and is a sustainable product with recycled content. This will suit the requirements of green building labelling systems like:

SGG Clear Cosmos products conform to:
